Software Engineer, Reliability/Evals @ Lindy.ai — production agent evals and prompt optimization

EXPERIENCE

Software Engineer, Reliability/Evals | Lindy.ai **May 2026 – Present**

- Shipped production agent evals: Online Scoring on millions of traces/week, plus replay that freezes source facts and world then compiles a fresh graph under current prod and overrides so regressions measure today's product, not a stale snapshot. Infra and data-gap failures are skips, not model zeros.
- Implemented GEPA (evolutionary prompt optimization) in production systems handling thousands of user agents, searching for Pareto-optimal prompts over hundreds of evals

PROJECTS

easl *Swift* easl.sh **2026 – Present**

- Native Mac app where coding agents run in real terminals on one infinite board beside code tiles, call graphs, a browser and notes; free and MIT, signed releases through a Homebrew cask (v0.3.0).
- Hyper-click diagram shapes, page elements or note items into the agent's next prompt; libghostty terminals and language-server code tiles.

hone *TypeScript, Docker* github.com/twaldin/hone **2026**

- Engine that improves code against a fixed, measurable objective: a model-backed optimizer proposes changes in a sandbox, and separate trusted code scores every candidate against the baseline so the optimizer never grades its own work.
- Original prompt optimizer's first result: lifted Claude Haiku 4.5 from 0.65 to 0.85 mean held-out score (9 unseen bugs × 3 samples) in April.

harness *Python, TypeScript* github.com/twaldin/harness **2026**

- Extracted the multi-CLI adapter layer into a published Python (`harness-cli`) and TypeScript (`@twaldin/harness-ts`) library with adapters for 26 coding CLIs, with a shared test-fixture suite enforcing identical behavior across both implementations

CS2 Trade-Up Bot *TypeScript, React, Express, PostgreSQL, Redis* tradeupbot.app **2026 – Present**

- Full-stack market arbitrage platform analyzing profitable CS2 trade-up contracts across 3 marketplaces in real time with 100+ daily active users
- Discovery engine evaluating 100,000+ listing combinations per cycle with Steam OpenID auth, Stripe subscriptions, Cloudflare Turnstile, real-time WebSocket feeds, 17-currency display

tim.waldin.net *Next.js, Docker, Socket.IO, xterm.js* tim.waldin.net **2025**

- Terminal-based portfolio where visitors explore projects inside isolated Docker containers through a browser shell; URL paths deep-link to shell commands (/blog/<slug>, /projects/<name>)

StudySpot *Next.js, Cloudflare Workers, pgvector, Claude API* studyspot.us **2025**

- Co-founded AI study platform using RAG + Claude to answer questions from uploaded course documents or Canvas API import; pgvector semantic search, streaming responses, auto-generated flashcards and quizzes

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, C, Shell (Bash, Zsh)
Frameworks:	Node.js, React, Next.js, Express, REST APIs, Tailwind, Socket.IO, shadcn/ui
Tools:	Git, CI/CD, Docker, Temporal, SQL (PostgreSQL, pgvector, SQLite), Redis, nginx, tmux, Cloudflare Workers, Bun, uv
AI:	agent evals and benchmarking, prompt optimization (GEPA, DSPy), LLM-as-judge pipelines, RAG

EDUCATION

Purdue University | Polytechnic Institute **Aug 2024 – Present**

B.S. Web Programming and Design (on leave of absence since May 2026)

Leadership: Founded high school robotics team; competed at FIRST Robotics Competition (FRC) World Championships (2×)
